SCULPTURAL PUBLIC FURNISHINGS

WHAT IS THE GREEN FURNITURE CONCEPT?

We think of it as the intersection between exceptional furniture design and environmental sustainability that yields original, eye-catching and functional furnishings. Above all, our designs are human-centric; engineered with the user experience at heart.

NOVA C SERIES

Discover the flexibility to create seating configurations as unique as your space with this sculptural seating line.

The award-winning Nova C Series, designed by Johan Berhin, offers freedom of design through modularity. It's an ideal seamless seating solution for large public spaces such as universities, shopping centers, airports, libraries, office lobbies, hotels, and community centers.

The organic look of wood instantly draws people in to have a seat, but it's the remarkable comfort of these seats that encourages them to stay for a while!

And with our revolutionary, super-durable wood finish, the benches are sure to keep their beautiful appearance even in the heaviest traffic environments!

Put a new spin on your public seating with the Nova C Series!

ENDLESS CONFIGURATION OPTIONS

With an expanded collection of standard modules, you can now put together an endless array of configurations. Run wild with unique sculptural shapes, or play it safe with straight models; it all depends on the needs of your unique space.

Sit Down & Power Up!

The Radius Charger can be placed on any leg of the Nova C Series or tucked below the Food & Beverage Armrest. Choose between your preferred combination of power outlets and/or USB charging ports. The Radius Charger carries the ETL Listed Mark.

FUNCTIONAL ADD-ONS

Optimize the user experience with these new and improved accessories for the Nova C Series

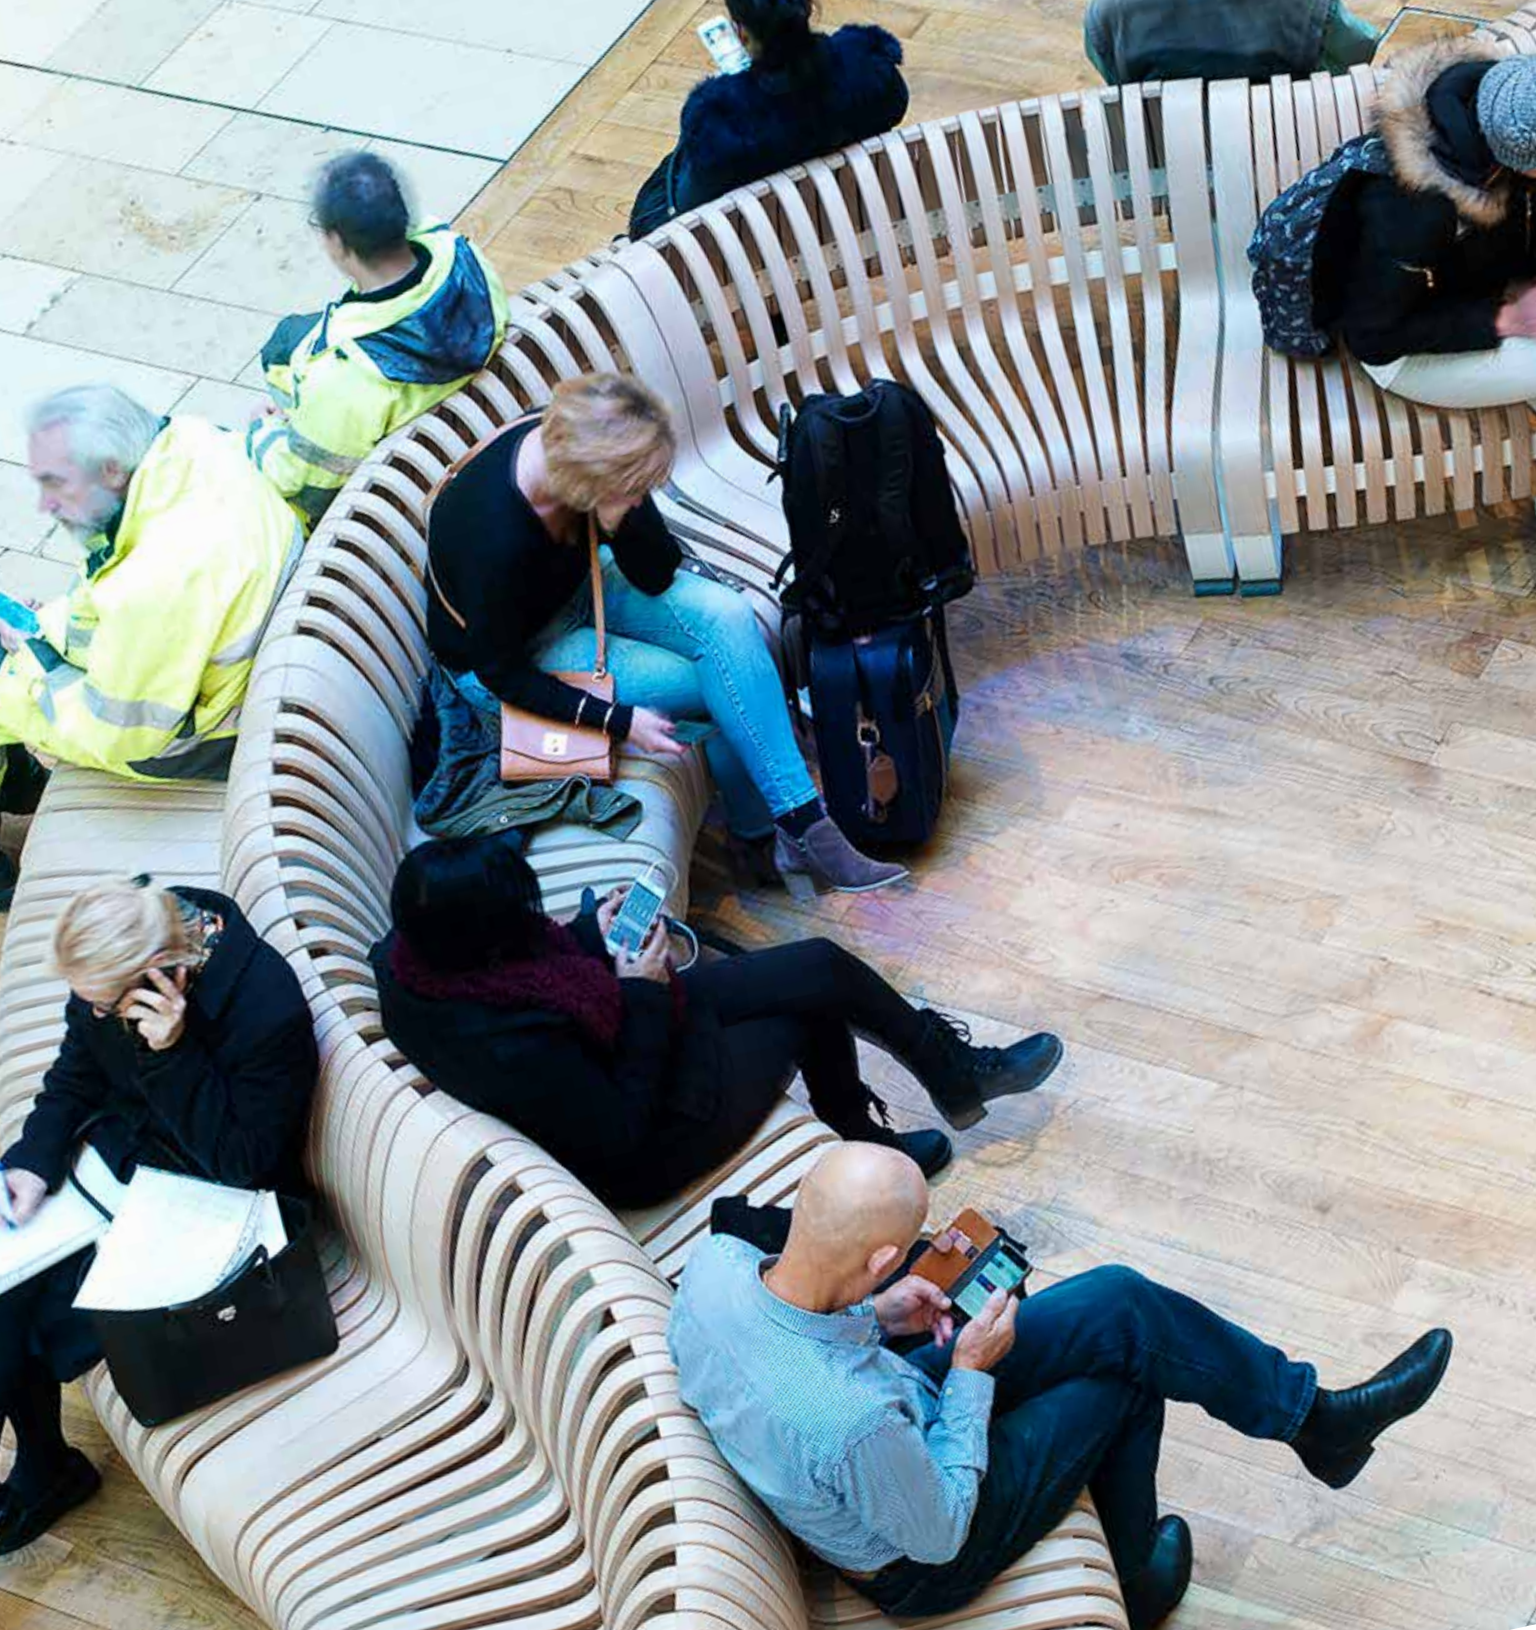

ONE SEATING LINE
TO SERVE ALL GENERATIONS

THE NOVA C KIDS is the playful variation of the Nova C Series, built on a frame that is 3 ½" shorter than the standard seat height. Multicolor modules are clipped side-by-side in a winding configuration to take on the whimsical shape of a friendly caterpillar.

THE NOVA CELEVATION is designed to accommodate users with limited mobility. The steel frame of the seat slopes upwards to seamlessly create an elevated section that is 1 ¼" higher than the standard Nova C. Each elevation module comes with armrests for added support on the way up and on the way down.

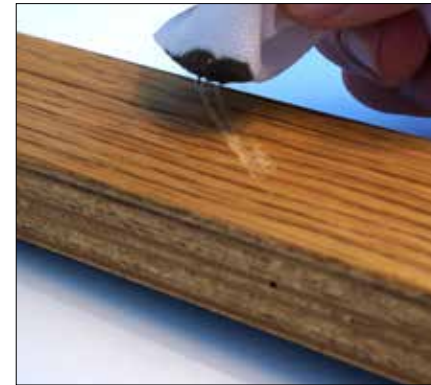

A DURABLE FINISH FOR HIGH TRAFFIC ENVIRONMENTS

Exceptional furniture deserves a durable finish!

That is why we treat the surface of our wood ribs with the Rubio Monocoat Hard Wax Oil.

Unlike traditional wood stains, the Rubio finish has a unique technology that forms a molecular bond with the wood fibers. This bond occurs with just a single application and creates a durable protection for the wood surface, all while ensuring an intense and deep color.

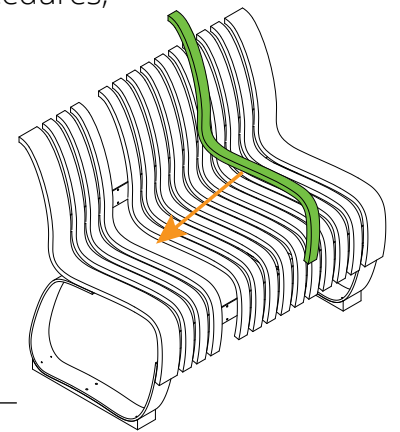

Thanks to this revolutionary technology, touching up a surface scratch is as simple as polishing a shoe. Simply dip a cloth into a can of Rubio and wipe over the scuff. Remove the excess and allow it to set for a few hours or overnight.

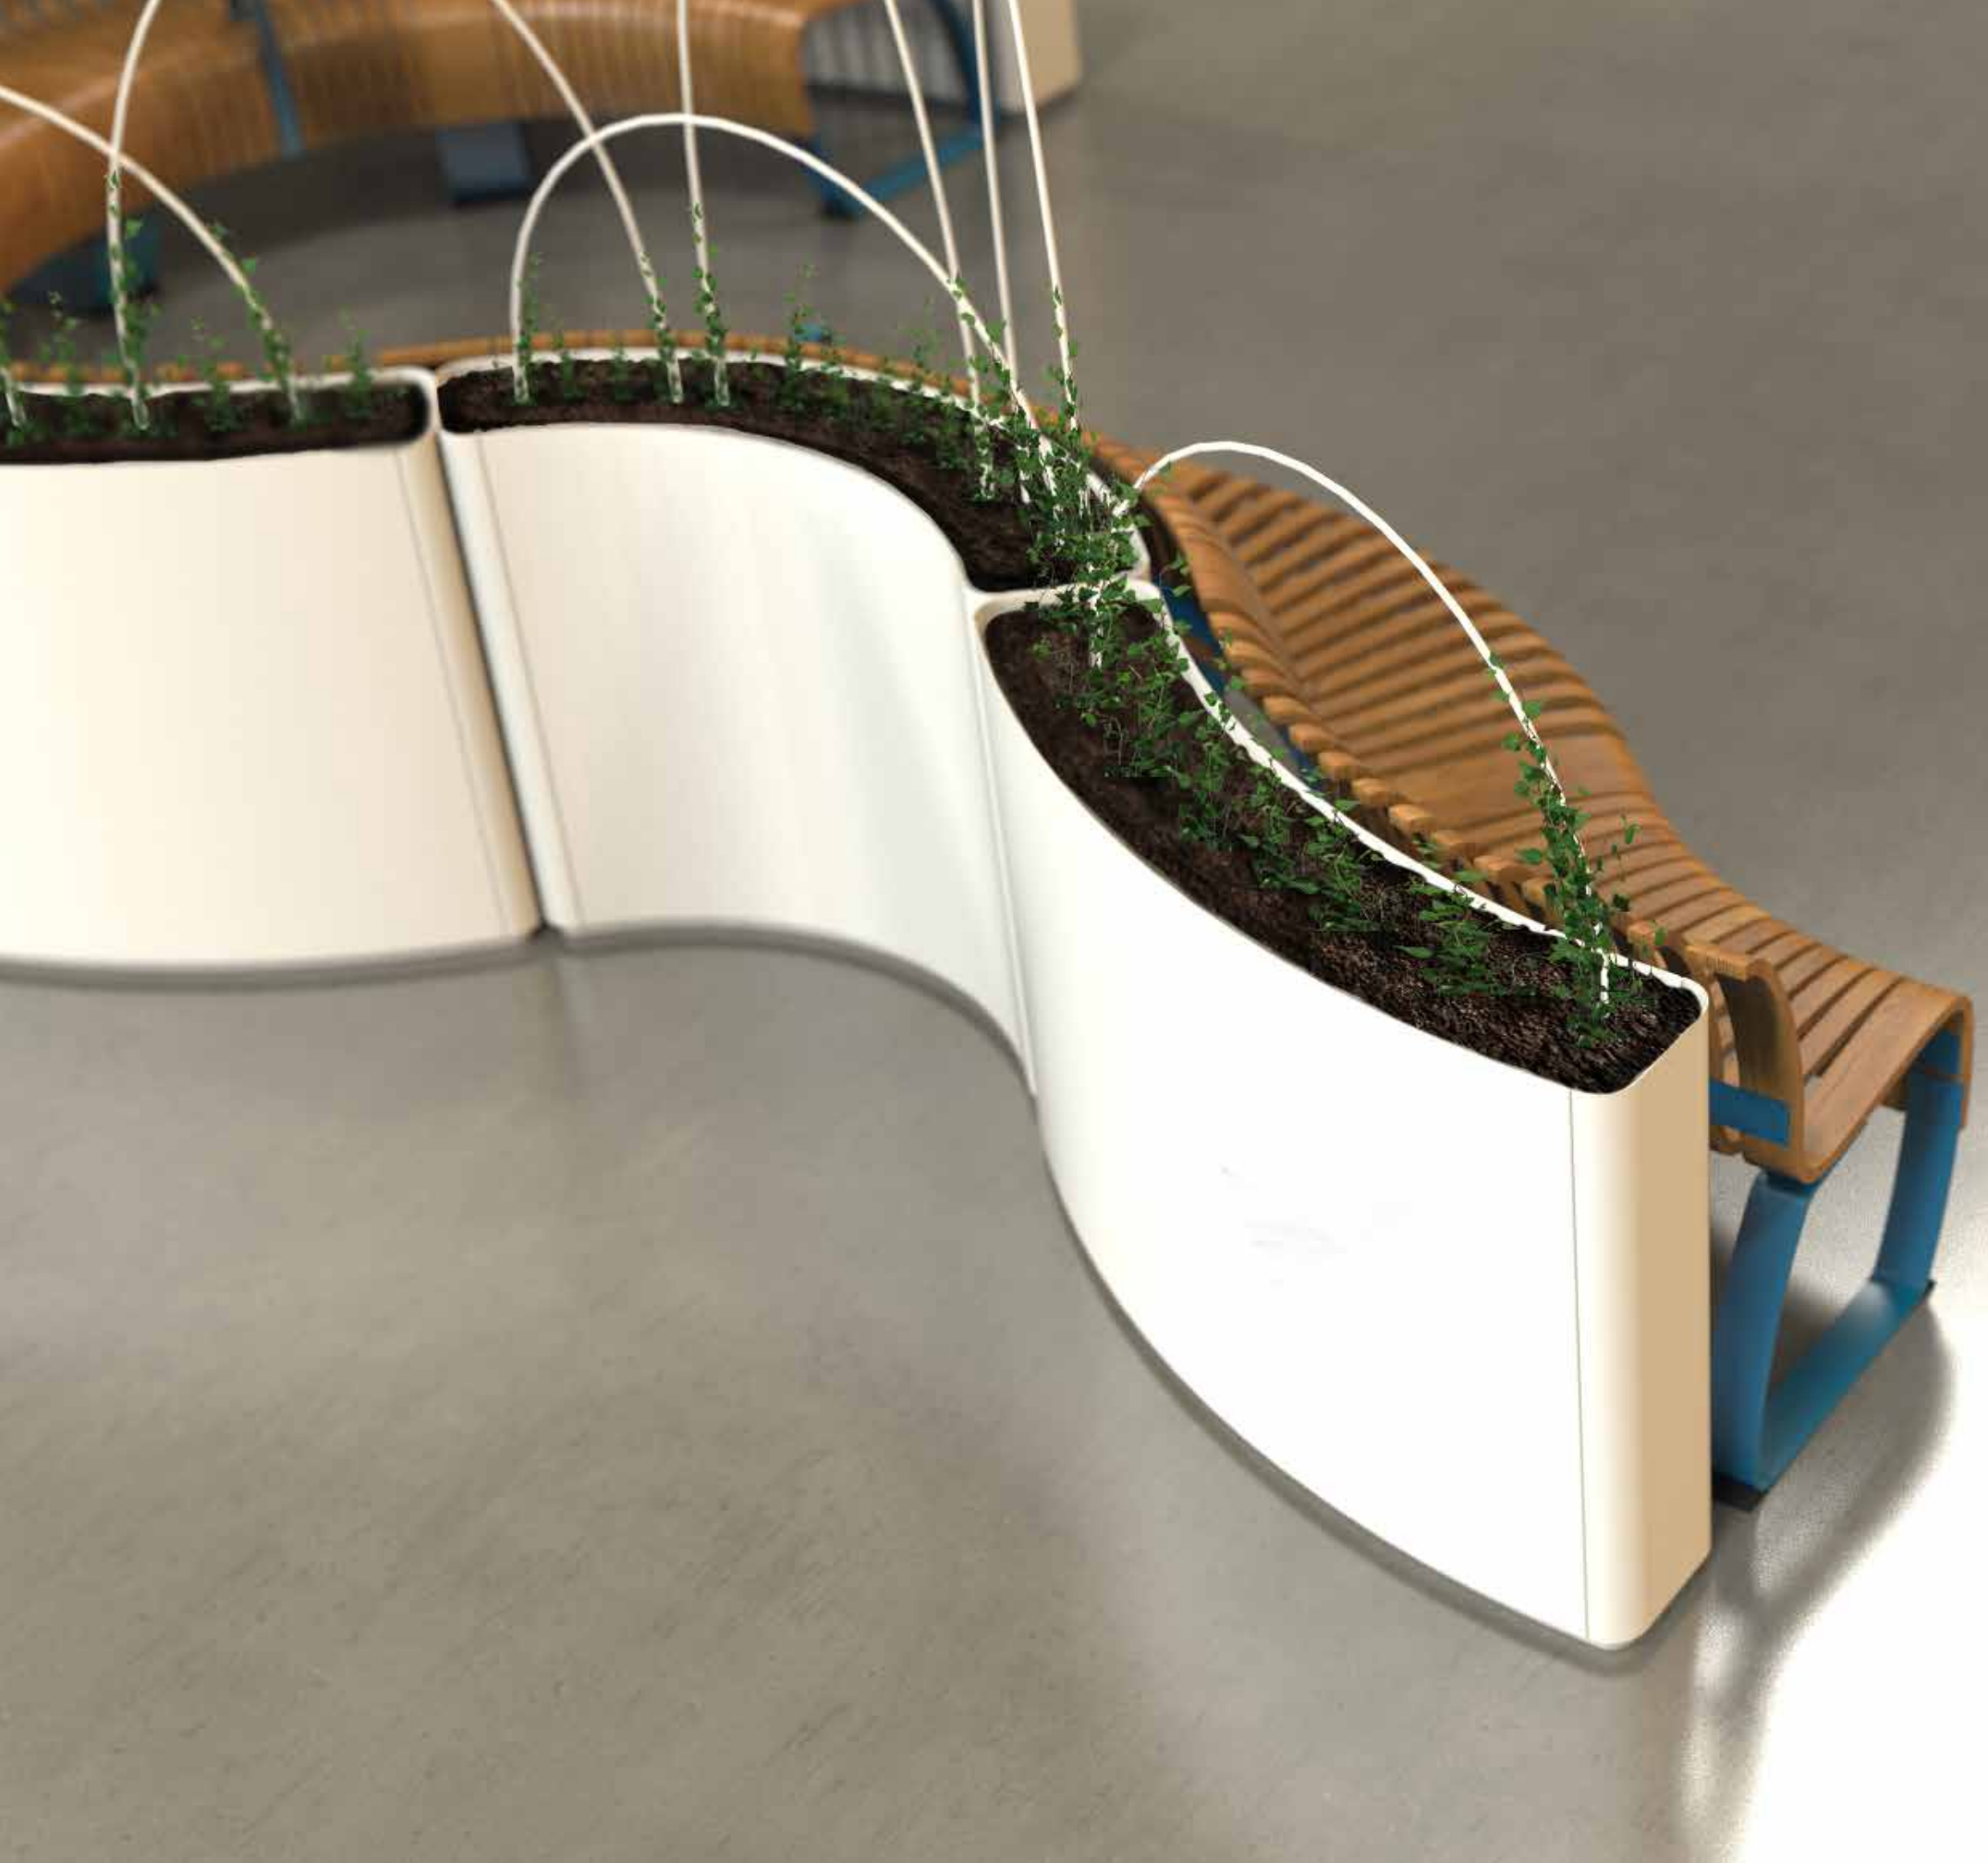

For larger repairs, simply remove the vandalized or damaged rib and replace it with a new one.

With low maintenance costs and easy care procedures, this product has proven its ability to maintain a new appearance over a long period of time, even in the heaviest traffic environments.

Easy to replace ribs in the event of vandalism or severe damage

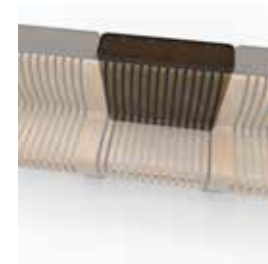

RADIUS SERIES

Add character and functionality to any space with the Radius Series, a line of accessories designed to integrate perfectly with the Nova C Series.

The Radius Divider is a privacy screen that attaches to the Nova C Back. Opt for a solid wall, which is an ideal surface for advertising and way-finding or choose the cut-out design for a more sheer effect. Custom cut-out patterns are also possible.

The Radius Planters allow you to incorporate greenery into your bench design. Indoor plants help reduce carbon dioxide levels, airborne dust levels, and help keep air temperatures down.

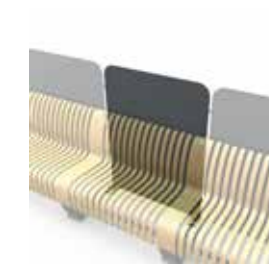

The Radius Recycle Bins are a quick and easy way to manage waste in your space. They can be installed as single units or connected in a row. The bins are easy to empty and heavy enough to stay in place. They come either as a solid sheet of steel or with custom cut-outs. Custom color lids, text and icons on the lids are also available.

CONFIGURATIONS

Choose from a wide variety of configurations, or mix and match modules to customize a design that fits perfectly into your unique space.

LEAF LAMP SERIES

Designed by Peter Schumacher, the Leaf Lamp is an ambient and acoustic light made entirely of natural materials.

The foliage consists of thin wool felt leaves that offer both flameproof and sound-absorbing qualities.

The wool leaves are attached to birch branches, which are clustered organically to mimic the natural designs found in nature.

The Leaf Lamp Series comes in two standard formats. The wool clusters can be suspended from the ceiling as a pendant. They can also be fastened to the top of a real birch trunk or steel tube to take on the shape of a tree.

The Leaf Lamp Series won the 2016 Best of NeoCon Award for Innovation in the Decorative Lighting category.

THE NATURAL PROPERTIES OF WOOL

Acoustic | Reduce noise levels significantly

Fire-Retardant | Eliminate safety hazards

Anti-Static | Remove dust in just seconds
