# GLATZ

## Manufacturer's presentation

As a family business with **125 years of tradition**, Glatz stands for creativity and courage, but also for the determination of strong women: from a one-man operation to a company with more than 100 employees, Glatz has become **one of the leading sunshade manufacturers in Europe and worldwide.**

Glatz is a model of precision, reliability, high quality and functional design. « **Our vocation is to design ever more effective products, which combine timeless elegance, wind resistance, durability and easy handling... These elements are at the heart of our DNA** » , emphasizes Markus Glatz. The motivation of our employees is essential to our success: « **Our know-how is reflected in every model, but it is first and foremost in our heads, and is the result of our unwavering commitment.** »

## Why choose Glatz?

### INNOVATION AND DESIGN

---

Glatz attaches as much importance to the design of its products as to their ergonomics and longevity. It's no coincidence that Glatz holds the most patents and design protection titles for parasols in Europe. Moreover, the company is constantly innovating with its Green Glatz range, an innovative coating that transforms into a purifying filter when exposed to the sun's rays.

### DURABILITY

---

Glatz products are built to last for many years. In fact, they are wind-tunnel tested to ensure that they will withstand the strongest winds. Even after decades, they can be repaired or re-covered.

### FLEXIBILITY FOR YOUR SPACES

---

Stability and sturdiness are the two essential characteristics of a Glatz parasol. There is a choice of fixing methods, depending on the nature of the ground and the situation on site. They are also adaptable for easy relocation.

# Glatz Green® innovation

Atmosphäre is proud to offer Glatz Green for health and nature

Glatz, a manufacturer of innovative, high-quality sunshades, got together with two partners (Sauleda and Pureti) to make its contribution to the environment and thus to health.

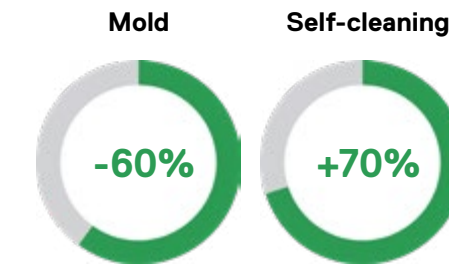

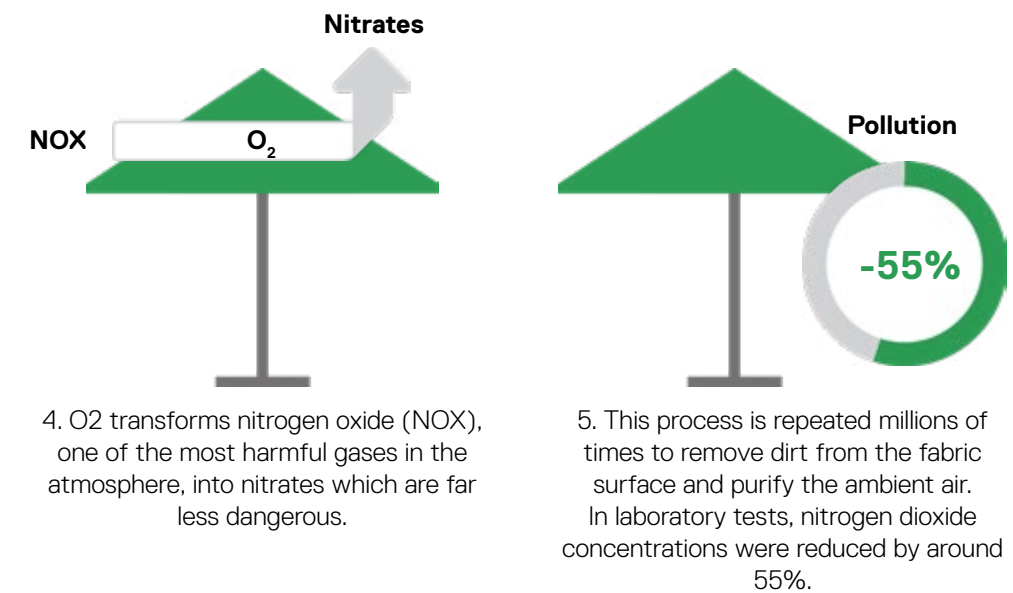

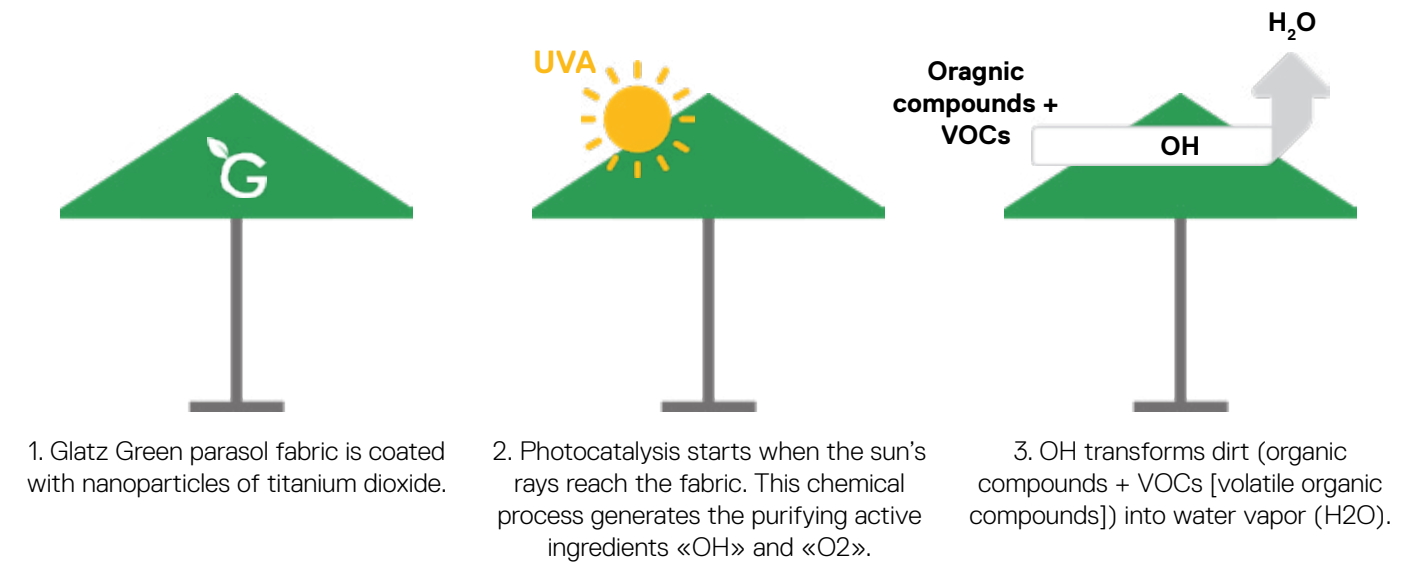

Through this collaboration, the three pioneers are bringing long-lasting sunshades onto the market which don't just protect you and your family from UV rays, rain and heat, but which also **purify the air – almost like a tree**. This is thanks to the innovative coating which becomes a purifying filter when exposed to sunlight.

Glatz Green parasol compensates pollution caused by cars. When you purchase a 4 x 4 m Green sunshade, Glatz will plant 27 trees\*

\*Number of trees varies based on sunshade size

# Photocatalysis - How it works

6. Furthermore, mold is reduced by 60%\* and the self-cleaning effect is +70%\*.

\*These percentages are for guidance only and may vary according to environmental conditions.

# PALAZZO ROYAL

The Swiss masterpiece.

---

Provides comfortable shelter for 20 people and protection from the sun or rain.

Perfect for large outdoor spaces, terraces, rooftops and corrosive environments.

Wind stability up to 110 km/h.

---

# PALAZZO NOBLESSE

High-performance.

---

Amplitude from 450 to 700 cm.

Perfect for large outdoor spaces, terraces, rooftops and corrosive environments.

Wind stability up to 95 km/h.

---

# PALAZZO STYLE

Dare to be stylish.

---

The iconic Palazzo Style giant parasol can withstand wind speeds of up to 110 km/h (with fixed anchoring).

Available in fourteen standard versions.

Opens with nine turns of the hand crank.

---

# CASTELLO PRO

The versatile all-rounder.

---

Telescopic opening system: quick and easy operation using the clamping lever.

Perfect for restaurant terraces, parks or playgrounds.

Wind stability up to 100 km/h.

---

# FORTELLO

The tall, wind-resistant one.

Specially designed for use in windy areas.

Easy opening thanks to a contra-rotating opening principle.

Wind stability up to 100 km/h.

# FORTERO

The wind-resistant  
mid-range model.

---

Patented, low-effort opening mechanism.

Perfect for terraces and pool areas.

Wind stability up to 70 km/h.

# FORTINO RIVIERA

The compact model.

---

Perfect for windy areas.

Convenient locking lever and patented opposing opening principle.

Wind stability up to 80 km/h.

---

# AMBIENTE NOVA

The king of side-mast  
parasols.

---

High-precision opening mechanism.

Majestic shade solution for terraces,  
360-degree rotating parasol.

Wind stability up to 45 km/h.

---

# FORTANO

Windproof in all conditions.

Specially designed for use in windy areas.

Opens and unfolds simultaneously. Parasol swivels 360 degrees.

Wind stability up to 55 km/h.

# Options

## Protective cover (included)

- Bar and zipper for easy hooding
- Woven using a special ripstop technique
- Particularly resistant thanks to the integration of thick fibers
- Polyurethane coating on the inside to protect against external humidity

## Self-supporting, movable base with or without casters

- 120 or 180 kg
- Dimensions 96 × 96 × 11.5 up to 19.5 cm
- Galvanized steel base
- Concrete or polished granite plate kit
- M4 mounting tube essential

## Freestanding gutters

- Protective solution to keep rain out, e.g. between a parasol and a facade
- Triangular gutters are mounted on the sunshade
- No opposite fastening required
- Fastened to the ribs with a leveling loop and a bracket

## Osyron LED battery spotlight with remote control

- White (approx. 2700K, 400lm per spot), adjustable in 5 levels
- Easy attachment of light sources with magnetic plate
- Operated by intuitive Glatz remote control
- Integrated battery with IP54 protection
- 4h runtime at 50% brightness level
- Available in sets of 2 or 4 spots (extendable to 8 spots)

## Simple or advertising prints

- Screen-printing process on fabric qualities 4 and 5
- Full screen printing on polyester (minimum quantities)
- Printable logo in EPS format required
- References: McDonald's, Burger King, Nestlé, etc.

## Curtains / side panels

- Choice of material color
- Length = side length of parasol
- Height = Parasol passage height (without valance) minus 5 cm
- PVC window seam possible (optional)
- PVC drip lip at end of side panel (optional)
- Angled joints, zippers or Velcro (optional)
- No sagging thanks to side support tubes
- Support tubes equipped with connectors and removable ball springs
- Secured by leveling buckle and stirrup on ribs

# Warranty

## GLATZ

### Term of warranty

---

All GLATZ products are covered by a 2-year limited warranty.

### Conditions

---

The warranty covers all manufacturing defects that appear during normal use of the product. The warranty does not cover losses due to theft, or damage caused by misuse, abuse, alteration, improper storage or acts of nature. The warranty also does not cover parts or products subject to normal wear and tear.

GLATZ reserves the right to repair and/or replace with the same product in case of an approved warranty claim.

In all cases, reasonableness and fairness shall be the prevailing factors.

### Entretien

---

GLATZ uses only materials that meet the industry standard for outdoor products in the manufacture of its sunshades. Despite the high technical standards of GLATZ products, wear and tear due to the weather can and will occur. To ensure maximum protection, we recommend that you store your sunshade under cover during the winter months, or that you use an original GLATZ protective cover if it is to be left out in the open.

- Parasols that have been closed while wet or damp should be reopened as soon as possible to allow them to dry.
- Even if the umbrella is closed and you use a protective cover, atmospheric moisture and mold spores can reach the umbrella fabric or the protective cover. Therefore, we recommend that you open the parasol from time to time to let it dry.
- We do not recommend leaving parasols outside in winter. The winter climate encourages the formation of condensation, which remains in the protective cover for a long time without ventilation.
- Ne jamais enrrouler ou plier une toile humide ou mouillée pendant une longue période.
- Never roll up or fold a damp or wet cover for a long period of time. Remove leaves and insect or bird droppings as soon as possible (starting point for microbial attack).
- Scrub dirt dry with a soft brush.
- Treat stains with warm water, a soft brush and a non-aggressive cleaner. Rinse thoroughly with clean water, allow to dry and treat with a conventional waterproofing product if necessary.
- Do not use aggressive cleaning products (pH value of 7).
- When opening, closing or adjusting the sunshade, make sure that the fabric does not rub against walls or other obstacles, and that it does not get caught in structural elements.
- Ensure that closed umbrellas are properly strapped down and the fabric strips folded outwards. Do not allow umbrellas to flutter in the wind. Abraded surfaces or holes cannot be claimed.
